Implementación de Redes Seguras (Gpo 501)

Actividad:

Avance 01 de Entrega final de la Prueba de Concepto: El crecimiento de la red corporativa

Estudiante:

Hilda Olivia Beltrán Acosta - A01251916 Karen Cebreros López – A01704254 Aranza Leal Aguirre – A01751706

Profesor:

Oscar Hernández

Fecha de entrega:

28 de noviembre del 2022

Con base en el diseño de red anterior, se realizaron algunas modificaciones para cumplir con lo requerido por la compañía, esto a partir de un crecimiento esperado por parte de esta. Dentro de estos cambios, se contempla el posible crecimiento de un 20% en el sector de empleados de cada oficina para los próximos 5 años. Por lo que el diseño de cada oficina y centro de producción queda de la siguiente manera.

Diseño Lógico de la Red (VLSM)

Se utilizan distintas VLANs, una para Empleados y otra para Servidores, lo cual nos ayuda a solamente utilizar una interfaz Giga Ethernet del Router de la Oficina. La VLAN Admin es la destinada a la gestión remota de los switches dentro de la infraestructura de la oficina de la Ciudad de México. Por lo cual debe ser el último bloque disponible y debe ser capaz de tener una dirección para cada uno de los switches a gestionar, ya que se quiere acceder a ellos de manera remota. La cantidad de IPs destinadas a Empleados es capaz de soportar la cantidad máxima de empleados actuales más el crecimiento esperado del 20%.

En cada oficina, excluyendo las oficinas centrales, se tomó en cuenta un total de 40 empleados máximo, con una proyección de crecimiento del 20%. Por lo que se consideró que una cantidad de 62 direcciones IP válidas es más que suficiente para los siguientes 5 años, incluso habría espacio para un mayor crecimiento. En los centros de producción, se consideró un total de 20 empleados máximo y su respectivo crecimiento del 20%, por lo que con 30 direcciones IP válidas es suficiente para el diseño lógico de la red. Se toma una VLAN de gestión, Admin, con 14 direcciones IP válidas, lo cual es suficiente en todas las ciudades. Para el NAT estático, se tomó en cuenta que se quiere acceder remotamente al switch, incluso sin estar en el mismo dominio de broadcast; por lo cual estas direcciones, junto con las de los switches deben ser visibles desde Internet. Es por esto que cada switch y cada servidor tienen asignada una dirección pública dentro del dominio proporcionado por la compañía.

De igual manera, se tomaron en cuenta los dispositivos que tendrán su IP asignada por medio de DHCP, esto para poder considerar el tamaño del pool a utilizar en las próximas configuraciones de los dispositivos.

Los bloques de direcciones IP a utilizar para las conexiones seriales que corresponden a cada oficina y centro de producción se mantuvieron, y la VLAN de gestión está en las últimas IPs válidas antes de estas.

Evidencia Trabajo Colaborativo

NOTAS:

- Las pruebas de conectividad se realizaron con éxito (corrección de la entrega pasada)
- Los passwords se cambiaron todos a tc2036, para facilitar el proceso
- Los usuarios son CEO y CIT en todos los switches y routers
